Applicant's arguments filed 7/15/02 have been fully considered but they are not persuasive.

Claims 20-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Van T Teen et al. '590

Note: All prior references utilized have been withdrawn.

Van T Teen teaches a macroporous ceramic support with a microporous layer (see claims). Applicants even admit for the record that this is a macroporous ceramic suitable as a micro-filtration support (see page 3 of REMARKS in 2/10/03 amendment and response by applicants.

Response:

The applicants argue Van Tveen '590 is directed to microporous materials and not to macroporous materials. Van Tveen teaches that the *average* pore diameter can be 1 micron which still overlaps the pore diameter claimed by applicants for their invention in the range of 0.5 um to 5 um. Overlapping ranges of amounts would have been prima facie obvious to one of ordinary skill in the art.
